

Scope plane

for the BookLiker app

What the users say they need?

- A website where can check and rate books easily.
- Can add new books to the collection

What they do not know they need?

- An option to update or delete a book to keep the books up to date
- A link where they can easily locate a bookshop online and purchase the book

Scenario	Requirements
User would like to like/dislike a book	A like/dislike button on the book cards for each book
User would like to add new book	A form to add a new book to the DB
User would like to update/delete a book	A form where can update the book and an option to delete it
User would like to know more about the book	A single book card containing more information
An option to sort or filter books	Buttons to be able to make filtered queries to the DB
User would like to buy the book	A link to an online website where the book can be bought
